

easySTP

Sewage Treatment Plants

Factory Made | Maintenance Free

Ready Stock | Noise Free | Smell Free

HELPS YOU MEET ALL YOUR COMPLIANCE REQUIREMENTS

Institutional | Commercial | Industrial | Municipal

Environmental laws are becoming stringent by the day forcing small builders, hospitals, commercial establishments and even educational institutions to treat sewage generated their premises. easySTP is ideal for them.

easySTP is a compact, plug-and-use, Glass reinforced Fibre plastic tank with internal compartments for Sedimentation, Anaerobic Digester, Aerobic Digester, Settling Tank and Dis-infection.

easySTP Process

1. Solid-liquid separation tank

Dirt, solid material, oil and fat content are separated from wastewater and stored as sludge.

2. Anaerobic filter bed tank

Anaerobic microorganisms cause decomposition of organic substances, leading to denitrification process.

3. MBBR tank

Aerobic microorganisms adsorbed on media inside the tank cause decomposition of organic substances, leading to nitrification process of ammonical nitrogen.

4. Sedimentation tank

Suspended solids in treated water are separated by the filter media & gravity.

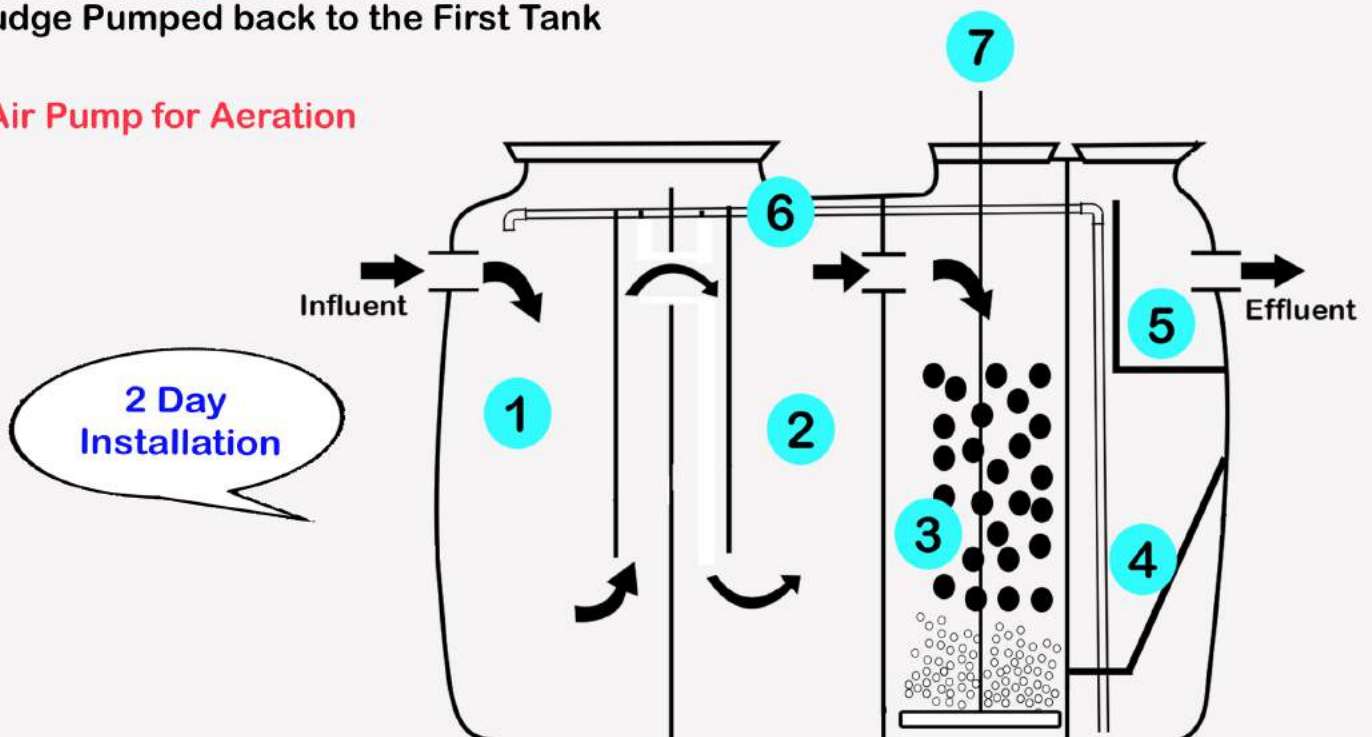

5. Disinfection tank

Treated water is disinfected by chlorine and then discharged outside.

6. Recirculating Pipe

Sludge Pumped back to the First Tank

7. Air Pump for Aeration
